***Allowable Subject Matter***

1. Claims 2-11 and 13-33 are allowed over prior art.
2. The following is a statement of reasons for allowance: As indicated in the previous office action claims 2, 4, 7, 10, 11 and 13-33 are allowed because they contain allowable subject matter. Applicant has cancelled previously rejected claim 1 and amended claims 3, 5, 6, 8 and 9 to depend on claim 2, therefore, claims 3, 5, 6, 8 and 9 are allowed. Although the prior art, Hershey et al, discloses synchronization in a telecommunication system that includes transmitting in a high speed network, transmission of multiple protocol signals associated with contemporary systems, FPGA (programmable link termination/programmable link instigation) which provides dynamic configuration of network in accordance with performance parameters and configuration of programmable device depends on protocol technology, and Hershey further discloses a recovery circuit for extracting data clock and circuits for extracting data signals, he fail to teach/suggest set performance parameters include a previous section fail indicator, PLT translates user signal to a data signal whenever rate R corresponds to a provisioned first protocol and passes user signal unchanged whenever rate R is not recognized by processing unit, reverse mapping unit for rearranging the bits of a container of a second protocol into data signal of first protocol, detecting the rate (R) of a continuous digital signal and determining a first protocol corresponding to rate (R), translating set of performance parameters from first protocol to a second protocol characterizing container signal and providing translated set into container signal.
